

Designed to Protect & Share  
your Medical Images

*Imagine a tiny box that fits in your hand. Unpack it, plug it to your network and power it on. You now have an "All-in-One" running solution available to store, archive and share all your DICOM images out of the box. All you need is to send your studies from any digital modality directly to the AccessBox. It will make them instantly available to any DICOM Workstation in your network for review and diagnosis. Hundred of thousands images can be stored/archived in the AccessBox's built-in storage and can be also replicated to a local external hard drive or a remote location like a highly secure Data Center, a remote Diagnostic centre and/or your private facilities. In addition, the AccessBox allows you to share your studies with doctors and patients using a web portal, tablet/smartphone applications or output to CD or DVD.*

- Full-featured DICOM repository
- Out-of-the-box solution
- No IT expertise required
- High storage capacity
- Transfer of studies between sites
- Data replication for Disaster Recovery
- Share images & reports
- Highly secure
- Local support

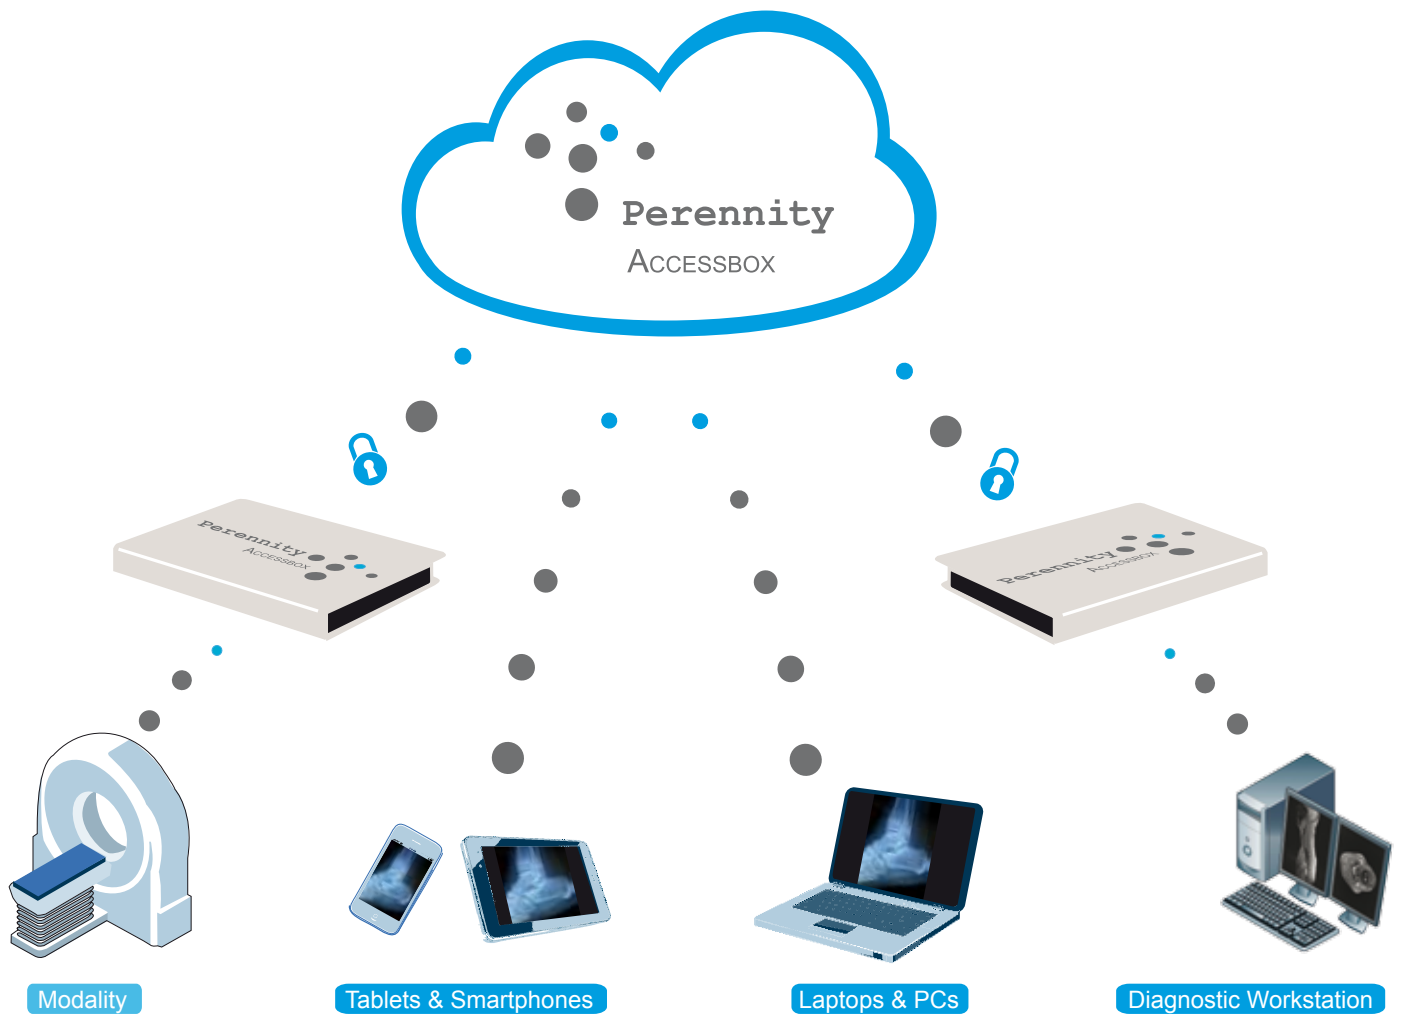

### Sharing & Transfer

The AccessBox offers several ways to securely transfer and/or share DICOM studies with remote Diagnostic Centers, Referring Physicians, and even Patients. DICOM studies can easily and automatically be exchanged between AccessBox units (e.g. several clinics using a central Diagnostic Center). Those studies can also be published using a secure Web Portal accessible to selected Doctors and Patients. An email can also be sent to notify users that a new study is available. Tablets and Smart Phones can also be used to review the studies. Continuing an already existing practice, CDs and DVDs can be produced to transfer and share DICOM studies, using any of the world's leading automated Disc publishers.

### Are you concerned about data loss?

The AccessBox has been designed to apply all best practices to preserve your valuable DICOM studies making sure they will still be available for decades, thus preserving your liabilities and interests. The content of the AccessBox's built-in storage can automatically be replicated to a local hard drive (e.g. a NAS system, Silent Cube). Concerned about a disaster occurrence? No problem, your data can be replicated to a highly secure external Data Center or any other remote location like your home. Multiple copies of your DICOM studies can be recorded to CD, DVD or BluRay (up to 50GB per disc). No need to spend your valuable time to secure your data. All operations are fully automated and do not require any IT expertise. The AccessBox comes pre-configured, ready to use and serviced by local Perennity Certified Partners..

### Are my images secure from unauthorized users?

This question is definitely legitimate. At the end, we are dealing with privacy. You don't want your Web Portal to be hacked, your transferred DICOM images being intercepted, the Data Center's employees having access to your reports, or unauthorized Doctors and Patients to access your studies..! Do not worry. The AccessBox uses the most advanced access and security control tools to make sure that only eligible users are granted access to the studies they are allowed to. AccessBox uses the highest levels of encryption to transfer, share and store images using Data Centers complying with International Regulations. We can provide you with any compliancy certificates. As a further step, the AccessBox is protected against any virus, malware, spyware or other intrusive program.
